

# FLIGHT RADIAL

The Flight Radial® from Goodyear is a computer-designed radial ply tire specially developed for today's high performance commercial aircraft. It's the toughest, most durable tire Goodyear makes, and features strong, rigid tread belts and tough rubber compounds for greater dimensional stability and cut resistance for longer life and increased landings. But don't just take our word for it! Current Flight Radial customers include: Southwest, Air Canada, and Lufthansa. So go with the tire that the big names trust—Goodyear Flight Radial.

## BENEFITS

- Greater dimensional stability for longer life and increased cut resistance
- Increased load carrying capability
- The most weight efficient construction for strength and interface with the aircraft wheel
- Fewer tire replacements and lower maintenance costs
- Improved fuel efficiency and reduced operating costs

## FEATURES

- Strong, rigid tread belts and improved rubber compounds
- Radial construction
- Special bead design
- Radial design increases tire tread life over conventional bias ply tires
- Weights up to 20% less than conventional aircraft tires
